		Revision No	01
		Revision Date	16.09.2024
		Pages	1/1

To protect water resources with sustainable practices, to ensure effective use of water and to cooperate with stakeholders in our value chain in this regard, by considering responsible production and consumption approach in all business processes in the fields of aerospace and defense industry.

- Turkish Aerospace is committed to comply with ISO 14046 Water Footprint standard and national / international conditions (customer requirements, social responsibility commitments, contracts with related parties, international sanctions, etc.) beyond all legal regulations and laws regarding water and wastewater management.
- Turkish Aerospace evaluates the risks and opportunities related to water in all its activities with a holistic approach, sets targets within the scope of sustainability and implements good practice examples.
- Turkish Aerospace, knowing that the basis of water management is the effective and efficient use of water, carries out training and informing activities in order to raise this awareness to all its employees and key suppliers.
- Turkish Aerospace provides the necessary resources and infrastructure to maintain and develop the effective management of water resources.
- Turkish Aerospace is committed to providing access to clean water by respecting everyone's right to use water.
- Turkish Aerospace adapts technological applications, alternative water resources and recycling / recovery practices in its direct and indirect activities. In order to save on water use, it evaluates the harvested rain water and treated gray water as alternative water resources. By adopting zero liquid discharge technologies in production, it ensures the reuse of the wastewater generated in the processes.
- Turkish Aerospace provides the sustainability and transparency of water management with digital solutions.
- Turkish Aerospace protects and monitors the value of water in processes related to the environment and climate, with senior management decisions.
- Turkish Aerospace contributes to the society by working together with its stakeholders to improve water resources and biodiversity in the basin where it operates.

Electronically Validated.
